Summary

Backend-focused developer with hands-on experience building production APIs using NestJS, TypeScript, and PostgreSQL. Passionate about system design, automation, and building tools that solve real problems. Seeking a backend engineering role to grow in a product-driven team.

Skills

- **Languages:** TypeScript/JavaScript, Java, Golang, Python, C/C++
- **Backend Frameworks:** NestJS, Spring Boot, Express.js
- **Databases & ORM:** PostgreSQL, MongoDB, Prisma, TypeORM
- **DevOps & Tools:** Docker, Docker Compose, Nginx, Redis, Git, Linux
- **Concepts:** REST API Design, RBAC, Database Migration, Background Job Processing (BullMQ), CI/CD
- **Other:** Electron, OpenAI API, Azure Speech API
- **English:** Intermediate (reading & writing technical documentation)

Work Experience

TESO GLOBAL

Backend Intern | Mar 2026 - Jun 2026

VitaDairy — Reward App Admin Consolidation (v1 & v2)

- Consolidated two separate Admin system versions (v1 & v2) into a unified platform with zero data loss and full backward API compatibility.
- Built bulk data processing features (Import/Export/Delete) with Excel file handling, duplicate detection, and row-level validation, leveraging BullMQ workers for asynchronous background job processing.
- Implemented authentication system with Role-Based Access Control (RBAC) and permission groups, redesigning the menu hierarchy with database migrations to support granular access control.
- Wrote and executed migration scripts to transform legacy v1 data structures into the v2 schema while keeping both API versions operational during transition.
- Leveraged AI-assisted coding tools to accelerate development, code reviews, and debugging complex migration logic.

HERA ELEVATOR

Backend Developer | Jun 2026 - Jul 2026

- Built a domain-driven maintenance engine with automatic contract and task generation mapped to construction warranty dates, plus a custom two-slot due-list model for carry-over obligations.
- Implemented structured maintenance ticket sequencing per construction with bulk ticket generation and automated DOCX report exports to streamline field operations.
- Developed a reimbursement image export pipeline aggregating Cloudinary assets with strict export limits and failure tracking to improve system stability and resilience.
- Designed a fine-grained RBAC authorization system with a dynamic permission matrix and a secure JWT auth flow backed by Redis session management and cookie-based handling.
- Constructed responsive internal web interfaces with optimized data tables, advanced filtering, and customized workflows to improve admin operational efficiency.

Notable Projects

Melodies Merch Store

Backend Developer | Dec 2025 - Feb 2026 | [GitHub](#)

- Built a production e-commerce backend API for a music merchandise platform using NestJS, PostgreSQL, and Prisma ORM, with full CRUD for products, orders, artists, genres, and discount codes.
- Implemented JWT authentication with RBAC supporting 3 user roles (customer, staff, admin) with granular endpoint-level permissions.
- Containerized the full stack (API + PostgreSQL + Redis + Nginx reverse proxy) with Docker Compose, deployed with SSL on a production server.
- Created comprehensive API documentation with OpenAPI/Swagger and Postman Collection.

FinTrack System

Backend Developer | Oct 2025 - Dec 2025 | [GitHub](#)

- Developed an automated MB Bank transaction tracker in Node.js using headless browser automation (Puppeteer) to retrieve and sync account histories.
- Designed a background processing pipeline with Redis queues and cron jobs for scheduled, fault-tolerant data retrieval.
- Containerized a multi-service environment (API + Captcha Resolver + Redis) with Docker Compose, including a custom endpoint script for dependency management.

Education

Bachelor of Science in Information Security

Academy of Cryptography Techniques (Học viện Kỹ thuật mật mã) | Sep 2023 - Expected 2027

TP. Hồ Chí Minh, Việt Nam

- **GPA:** 3.2/4.0
